

React – Ex – Forms

Ex 1

Create a component which pull the data for a given user by click the “Get Data” button as follows :

The screenshot shows a web browser window with the address bar displaying 'localhost:4200'. Below the address bar, there is a form with the following elements:

- A label 'User ID :' followed by a text input field containing the value '3'.
- A 'Get Data' button to the right of the 'User ID' input field.
- A label 'Name :' followed by a text input field containing the value 'Clementine Bauch'.
- A label 'Email :' followed by a text input field containing the value 'Nathan@yesenia.net'.
- An 'Update' button below the 'Email' input field.

Changing the data and pressing “Update” will update the data to the server (<https://jsonplaceholder.typicode.com/users>). Use DAL service for retrieving and updating the form data
